Anne Rice's Vampire Chronicles. Books. History. Anne Rice - Wikipedia. Anne Rice was born April 30, 1946, in Mount Airy, Philadelphia. Rice was raised in the Church of the Visitation, and she read voraciously at an early age. She developed an early passion for the romantic and Gothic. Rice attended Scripps College and the University of Mississippi. During college, Rice wrote several screenplays and sold two of them, but never pursued a career in show business. She completed a BA at Rice University and an MFA at Antioch University in California. She married author Louis Saulnier in 1972, and her first book, *The Feast of All Saints*, was published in 1976. Rice began to pursue writing as a career, and she became the first American woman to win the World Fantasy Award for Best Novel. Her work has garnered an enormous following, particularly among vampire fans.

In 1992, Rice published *Interview With the Vampire*, which became the best-selling vampire book in history. In 1996, Rice's

novel Vampire Chronicles won her the World Fantasy Award for Best Novel. Rice is also known for her series about the Vampire Lestat and other vampires, which includes Interview With a Vampire, The Vampire Lestat, The Tale of the Body Thief, Vittorio, The Queen of the Damned, and Memnoch the Devil. Rice won the World Fantasy Award for Best Novel in 1996 for Vampire Chronicles. She is also an occasional actress and has appeared in the films Interview with a Vampire, The Queen of the Damned, The Secret in Their Eyes and The Passion of The Christ. She has received the Lambda Literary Award, the World Fantasy Award, the American Academy of Arts and Letters' Gold Medal

I have an array in [0,n-1] If I want to sum just elements [0,j] but leave the rest of the array untouched I would have import numpy as np import numpy.core.defchararray as npch A = np.random.rand(100) B = np.random.rand(100) C = np.sum(A[0:10]) print(npch.fromstring(npch.charp2string(C), dtype=np.int)) I also want to know if there is a more pythonic way to do the same thing. I tried the following import numpy as np import numpy.core.defchararray as npch A = np.random.rand(100) B = np.random.rand(100) C = np.sum(A[0:10]) 2d92ce491b
