Anteroposterior expansion of a dorsally positioned neural tube in the cat fetus. The observation of a dorsally positioned neural tube in the midbrain region of a cat fetus on day 22 of gestation prompted the study of the changes in the neural tube with embryonic and fetal development. Serial thin sections were studied using the "optic-corpuscular" (O/C) and the "optic-optic" (O/O) correlation techniques. Using the O/O correlation technique, a large ventral midbrain defect was demonstrated in a fetus on day 25 of gestation (stage 21 of fetal development). On days 26 and 27 (stage 22) and 29 (stage 23) of fetal development, the defect became a ventral convexity with the edge of the rostral and caudal ventral midbrain in continuity with the lamina terminalis and tor 2d92ce491b
