You don't wish to break any rules and get yourself into trouble.. mihail solohov tihi don pdf 20. 2020-05-05 09:15:51. . You don't wish to break any rules and get yourself into trouble.... mihail solohov tihi don pdf 20.. Q: Couldn't update the section after updating the row: TableView Hi I have a two section table view and each row has a couple of labels. I use a cellfactory to create the cells and set it as each row of the table. Also I use a class to get the values from a coredata and call a protocol to update the values to the table. When I update the values in the coredata it is updated in the table. However after I scroll the table and select a cell to show the updated values, it appears empty. Can anyone help me to understand why this is happening? Thanks in advance. this is how I update the cell in the tableview -
(UITableViewCell *)tableView:(UITableView *)tableView cellForRowAtIndexPath:(NSIndexPath *)indexPath { static NSString *MyIdentifier = @"MyIdentifier"; UITableViewCell *cell = [tableView dequeueReusableCellWithIdentifier:MyIdentifier]; // Configure the cell... Cell *cell = (Cell *)[tableView cellForRowAtIndexPath:indexPath]; //Call protocol update to set the values in coredata [cell setValueForCell:indexPath]; return cell; } - (void)tableView:(UITableView *)tableView didSelectRowAtIndexPath:(NSIndexPath *)indexPath { Cell *cell = (Cell *)[tableView cellForRowAtIndexPath:indexPath]; // Configure the cell... [cell setValueForCell:indexPath]; //Call protocol update to set the values in coredata 2d92ce491b
